Course Description

Session 1: Introduction to Bridge Engineering

June 6, 2016

This session will be a general introduction to bridge engineering with the goal to prepare students for the 8-part course. The session will include a review of basic bridge nomenclature and the various steel bridge superstructure types, bearings, and supporting substructure types. In addition, a brief tutorial on how to read bridge plans will be provided. This will be followed by a detailed look into the various types of framing plans typically used for steel I-girder bridges and a cursory discussion of analysis methods. The session will identify the two major bridge design specifications, AASHTO LRFD Bridge Design Specifications and the AREMA Manual for Railway Engineering.

There's always a solution in steel!

Learning Objectives

- Become familiar with basic bridge nomenclature including aspects of superstructure, substructure and foundations.
- Gain an understanding of the various types of bridges and the characteristics of each.
- Gain an understanding of the information included in steel bridge construction documents and an in-depth look at various types of framing plans.
- Be introduced to the two major bridge design specifications; AASHTO LRFD Bridge Design Specifications and the AREMA Manual for Railway Engineering.

There's always a solution in steel!

NSBA Night School: Session Overviews

10

Night School Course B1 Introduction to Steel Bridge Design

- **June 6 - Session 1: [Introduction to Bridge Engineering](#)**
- June 13 - Session 2: [Introduction and History of AASHTO LRFD Bridge Design Specifications](#)
- June 20 - Session 3: [Steel Material Properties](#)
- June 27 - Session 4: [Loads and Analysis](#)
- July 11 - Session 5: [Steel Bridge Fabrication](#)
- July 18 - Session 6: [Plate Girder Design and Stability](#)
- July 25 - Session 7: [Effects of Curvature and Skew](#)
- August 1 - Session 8: [Fatigue and Fracture Design](#)

11

Session 1

- **Introduction to Bridge Engineering**
 - Bridge Nomenclature
 - Types of Bridges
 - Girder Bridge Superstructures
 - Substructures
 - Bridge Plan Set Organization and Content
 - I-Girder Bridge Framing Plans
 - Analysis Methods
 - Design Codes

12

Bridge Nomenclature

13

Main Elements of a Bridge

14

Presentation Poll 1

15

Superstructure

- Everything Above the Substructure

16

Superstructure

- **Everything Above the Substructure**
 - Barriers, Medians, Sidewalks
 - Wearing Surfaces
 - Deck
 - Deck Forms
 - Girders
 - Cross Frames, Diaphragms, Lateral Bracing
 - Bearings

17

Superstructure

18

Superstructure

19

Main Elements of a Bridge

20

Substructure

- **Everything Below the Superstructure and Above the Ground**
 - Abutments/End Bents
 - Piers/Bents
 - Pier/Bent Caps
 - Columns

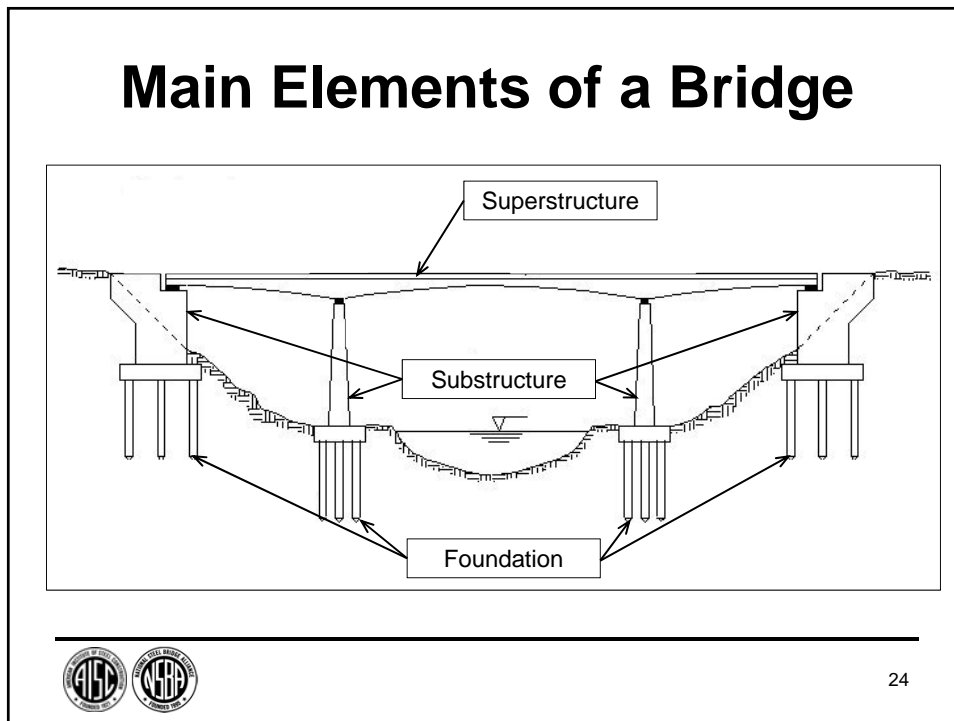

21

Substructure

22

Foundations

- **Everything Below the Ground**
 - Footings
 - Pile Caps
 - Spread Footings
 - Drilled Shafts
 - Piles

25

Foundations

26

Other Bridge Nomenclature

- Joints
- Approach Slab
- Slope Protection
- Wingwalls

27

Types of Bridges

28

Deck Arch

- Generally true arch
- Entire arch located below the deck
- Generally used in deep valleys with steep walls
- May use half-through arch to keep bearings above high water elevations

29

Through Arch

- Generally tied arch
- Often used when underclearance is limited
- Effective where deep foundations are required
- Above-deck portion of half-through arch can be a tied arch

30

Partial Through Arch

- Can be either true or tied arch

31

Presentation Poll 2

32

Deck Truss

- Entire truss is below the bridge deck
- Floorbeams frame into top chord or rest on top
- Truss spacing closer than for through truss
 - Reduces length/cost of lateral bracing / sway bracing systems
- Easier to widen in the future

33

Through Truss

- Deck runs between trusses close to bottom chords
- Desirable when vertical clearance is limited
- Sidewalk can be inside or outside trusses

34

Partial Through Truss

- Similar constraints to through trusses
- Truss type needs to have vertical members
- All sway bracing stays below the bridge deck

35

Cable Stayed Bridges

- Tall towers
- Stay cables carry deck loads back to towers
- Stay cables attached to edge girders

36

Suspension Bridges

- Main cables outside the edges of deck and draped over towers in saddles
- Vertical cables support deck at relatively short intervals
- Very light superstructure
- Appropriate for spans >3000'

37

Through Girder Bridges

- Main support girders located outside the deck
- Useful where vertical clearance is limited and heavy loads are anticipated
- Common superstructure type for Railroad Bridges

38

Deck Girder Bridges

- Common superstructure type for highway bridges
 - Girder/Beam Bridges
 - Floorbeam/Substringer Bridges

39

Deck Girder Bridges: Girder/Beam Bridges

- Versatile shapes and configurations

40

Deck Girder Bridges: Floorbeam/Substringer Bridges

- Stiff systems
- Capable of carrying heavy loads
- Often used in Railroad bridges

41

Introduction to Steel Bridge Design

Session 1: Introduction to Bridge Engineering

There's always a solution in steel.

Joanne Shaner, PE
HDR – Cleveland, OH

Girder Bridge Superstructures

43

Barriers

44

Decks

- Provide lateral stiffness to the superstructure

45

Future Wearing Surfaces

- Provides a smooth riding surface on older/damaged decks

46

I-Girders: Plate Girders

- Deep girders can span very long distances
- Vast range of sizes and shapes

49

Box Girders

- Box section efficiently resists torsion effects
- Vast range of sizes and shapes

50

Cross Frames

- Used on steel girder bridges to provide torsional stiffness during construction and in the final condition

51

Diaphragms

- Similar to cross frames: provide torsional stiffness during construction and in the final condition
- Typically used on shallow beams

52

Lateral Bracing

- Used to provide lateral stiffness and limit lateral deflections

53

Bearings

54

Bearings: Rocker Bearings

55

Bearings: Elastomeric Bearings

- Common and economical bearing

56

Bearings: Pot Bearings

- Allows for high loads, large movement, and moderate rotations

57

Bearings: Disc Bearings

- Allows for high loads, large movement, and moderate rotations

58

Bearings: Disc and Pot Bearings

Disc Bearing

Pot Bearing

59

Bearings: Disc Bearings

Guided Bearing

Non- Guided Bearing

60

Bearings: Roller Bearings

- Accommodates heavy loads, large movement, and minimal rotations

61

Presentation Poll 3

62

Substructures

63

Abutments

- Where the roadway ends and the bridge begins

64

Abutments

Independent Backwall

Integral

65

Multicolumn Piers

- Pier cap supported by columns

66

Single Column Piers

- Aesthetically pleasing

67

Integral Piers

- Useful when vertical clearance constraints exist

68

Bridge Plan Set Organization and Content

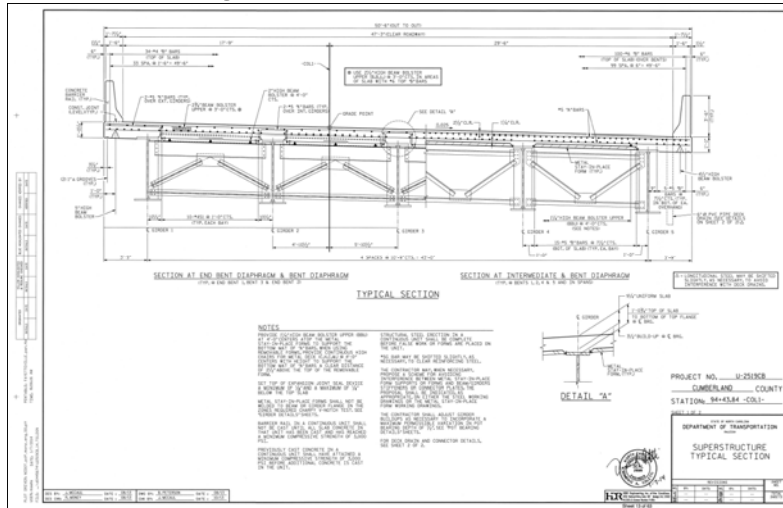

69

Plan and Elevation

70

Typical Section

71

Typical Section

72

Presentation Poll 5

119

Analysis Methods

- Line girder analysis (“1D”)
- Refined analysis (“2D” and “3D”)

120

Analysis Methods

- Line Girder Analysis
 - Considers girder only
 - No recognition of system behavior
 - Appropriate for final design of simple bridges
 - Appropriate for preliminary design and validation of complex bridges, with caveats

121

Analysis Methods

- Refined analysis methods
 - 2D Grid Analysis
 - 2D Plate & Eccentric Beam Analysis
 - 3D FEM Analysis

122

Analysis Methods

- 2D Grid Analysis
 - Girders modeled as line elements
 - Diaphragms modeled as line elements
 - Deck modeled in strips as line elements

123

Analysis Methods

- 2D Plate & Eccentric Beam Analysis
 - Variant of 2D grid analysis
 - Deck modeled with plate or shell elements

124

Analysis Methods

- 3D FEM Analysis
 - Flanges: beam or plate elements
 - Webs: plate elements
 - Diaphragms, bracing: truss or plate elements
 - Deck: solid or plate elements

125

Analysis Methods

- Which should you use?
 - “It depends...”
 - Analysis method should be appropriate for the complexity of the bridge

126

Session 1 Recap

- **Introduction to Bridge Engineering**
 - Bridge Nomenclature
 - Types of Bridges
 - Girder Bridge Superstructures
 - Substructures
 - Bridge Plan Set Organization and Content
 - I-Girder Bridge Framing Plans
 - Analysis Methods
 - Design Codes

8-Session Package Registrants Videos and Quizzes

Videos

- For Sessions R1 – R4, find access to recordings starting September 11. Recording access expires on November 23.
- For Sessions L1 – L4, find access to recordings within two days after the live air date. Recording access expires three weeks after the live session.

Quizzes

- For Sessions R1 – R4, find access to quizzes starting September 11. Quizzes are due on November 23.
- For Sessions L1 – L4, find access to quizzes within two days after the live air date. Quizzes are due three weeks after the live session.
- A final exam will also be given.
- Quiz scores are displayed in the Course Resources table.

There's always a solution in steel!

8-Session Package Registrants Course Credit

Attendance and PDH Certificates

- For Sessions R1 – R4, you must pass the quiz to receive credit for the session.
- For Sessions L1 – L4, you have two options to receive credit for the session.
 - Option 1: Watch the session live. Credit for live attendance will be displayed in the Course Resources table within two days of the session.
 - Option 2: Watch the recording and pass the quiz.

EEU Certificates – Certificate of Completion

- In addition to PDH certificates earned for each individual session, an EEU (Equivalent Education Unit) certificate of completion will be issued for participants who complete the full course. Participants must pass at least 7 of 8 quizzes and the final exam to earn the EEU.

Distribution of Certificates

- All certificates (PDH and EEU) will be issued after the final session. Only the registrant will receive certificates for the course.

There's always a solution in steel!
